CLI reference

calepin

```
Preprocess Typst documents with executable code chunks

Usage: calepin <COMMAND>

Commands:
  new      Create a new example Typst file or website scaffold
  health   Check Calepin's local runtime environment
  compile  Preprocess, then invoke typst compile
  watch    Watch, preprocess, and delegate recompiles to typst watch
  serve    Serve static files locally
  stop     Stop a running calepin watch process
  clean    Remove `.calepin` directories and generated artifacts
  help     Print this message or the help of the given subcommand(s)

Options:
  -v, --version  Print version
  -h, --help     Print help
```

calepin new

```
Create a new example Typst file or website scaffold

Usage: calepin new [OPTIONS] <PATH>

Arguments:
  <PATH>  Path to the new .typ file, or `website`/`academic`/`theme` to scaffold
project files

Options:
  -f, --force          Overwrite the file if it already exists
      --theme <THEME>  Builtin theme to copy when PATH is `theme` (default:
calepin)
  -h, --help           Print help
```

calepin health

```
Check Calepin's local runtime environment

Usage: calepin health [OPTIONS]

Options:
      --config <CONFIG>  Path to project config TOML
      --json             Print machine-readable JSON
      --strict           Exit with an error when warnings are present
  -h, --help             Print help
```

calepin compile

```
Preprocess, then invoke typst compile

Usage: calepin compile [OPTIONS] <INPUT> [OUTPUT] [TYPST_ARGS]...

Arguments:
```

```
  <INPUT>
          Input .typ file, or a website source directory containing calepin.toml

  [OUTPUT]
          Output file path, or website output directory when INPUT is a directory

  [TYPST_ARGS]...
          Arguments forwarded to typst compile after `--`

Options:
      --format <FORMAT>
          Output format passed to typst compile

          [possible values: pdf, png, svg, html]

      --theme <THEME>
          Theme bundle: a builtin name (calepin, academic), a path to a theme
directory, or false

      --config <CONFIG>
          Path to project config TOML

  -q, --quiet
          Quiet mode

      --timeout <TIMEOUT>
          Per-chunk timeout in seconds

  -P, --param <KEY=VALUE>
          Override a document parameter as `key=value` (repeatable).

          Takes precedence over `calepin.setup(params: ...)`, so the same document
can render with different values without editing the source.

  -h, --help
          Print help (see a summary with '-h')
```

calepin watch

```
Watch, preprocess, and delegate recompiles to typst watch

Usage: calepin watch [OPTIONS] <INPUT> [OUTPUT] [TYPST_ARGS]...

Arguments:
  <INPUT>
          Input .typ file, or a website source directory containing calepin.toml

  [OUTPUT]
          Output file path, or website output directory when INPUT is a directory

  [TYPST_ARGS]...
          Arguments forwarded to typst watch after `--`

Options:
      --format <FORMAT>
          Output format passed to typst watch
```

```
          [possible values: pdf, png, svg, html]

      --serve
          Serve the website while watching a directory

      --host <HOST>
          Interface to bind when serving a watched website

          [default: 127.0.0.1]

      --port <PORT>
          Port to bind when serving a watched website (default: first free port
from 8000)

      --config <CONFIG>
          Path to project config TOML

  -q, --quiet
          Quiet mode

      --timeout <TIMEOUT>
          Per-chunk timeout in seconds

  -P, --param <KEY=VALUE>
          Override a document parameter as `key=value` (repeatable).

          Takes precedence over `calepin.setup(params: ...)`, so the same document
can render with different values without editing the source.

  -h, --help
          Print help (see a summary with '-h')
```

calepin serve

```
Serve static files locally

Usage: calepin serve [OPTIONS] <DIR>

Arguments:
  <DIR>  Directory containing static files to serve

Options:
      --host <HOST>  Interface to bind [default: 127.0.0.1]
  -p, --port <PORT>  Port to bind (default: first free port from 8000)
  -h, --help         Print help
```

calepin stop

```
Stop a running calepin watch process

Usage: calepin stop [INPUT]

Arguments:
  [INPUT]  Input .typ file to stop the matching calepin watch. Omit this value to
stop all active watches under the current project's `.calepin` directory
```

```
Options:
  -h, --help  Print help
```

calepin clean

```
Remove `.calepin` directories and generated artifacts

Usage: calepin clean [OPTIONS]

Options:
  -d, --depth <DEPTH>  Maximum recursion depth when searching for `.calepin`
directories
  -y, --yes            Skip interactive confirmation and delete immediately
  -h, --help           Print help
```
