

Install

Typst CLI

Calepin requires Typst 0.15.0 or newer. Install or update the Typst CLI from the Typst installation instructions, and make sure it is available on your PATH.

Calepin

MacOS and Linux:

```
curl --proto 'https' --tlsv1.2 -Lsf https://github.com/vincentarelbundock/calepin/releases/latest/download/calepin-installer.sh | sh
```

Windows via powershell:

```
powershell -ExecutionPolicy Bypass -c "irm https://github.com/vincentarelbundock/calepin/releases/latest/download/calepin-installer.ps1 | iex"
```

Updating Calepin

If you installed Calepin with the official installer, update it with:

```
calepin update
```

This updates only Calepin, using the `calepin-update` helper installed alongside the main binary. Typst, Python, R, Jupyter, and Jupyter kernels are managed separately.

If `calepin update` reports that `calepin-update` is missing, reinstall Calepin with the official installer command above. If you installed Calepin with Cargo, Homebrew, or another package manager, use that tool to upgrade Calepin instead.

Jupyter support

Calepin has built-in support for **Python** and **R**, and can also run many other languages through Jupyter kernels, but that requires installing the language kernel and kernel client tooling.

To use a Jupyter kernel, install `jupyter_client` first:

```
pip install jupyter_client
```

Most kernels then install with a single `pip install`:

```
pip install bash_kernel      # Bash
pip install octave_kernel    # GNU Octave
pip install gnuplot_kernel    # Gnuplot
```

Some Python kernel packages also need to register a Jupyter kernelspec after installation. For Bash, run this in the same Python environment that Calepin uses:

```
python -m bash_kernel.install --sys-prefix
```

If you use `uv` run, the equivalent command is:

```
uv run python -m bash_kernel.install --sys-prefix
```

Some kernels are installed from their language's own package manager:

```
# Julia
julia -e 'using Pkg; Pkg.add("IJulia")'
```

Run `jupyter kernelspec list` to see what engines are registered and available.
