

Options

Calepin options fall into three groups: execution, result display, and figure output. Set defaults with `#calepin.setup` and override per call with `#calepin.chunk(...)` or `#calepin.inline(...)`.

```
# Global/default values
[setup]
# Execution

echo    = true      # show source before output
eval    = true      # execute chunk
output  = true      # include stdout/stderr output
error   = false     # record execution errors instead of failing
warning = true
message = true
lang    = "python"  # optional: scope defaults to one language

# Result rendering
results = "verbatim" # "verbatim", "asis", or "hide"
format  = "auto"      # preferred result format(s)
item    = "all"       # all, first, last, or an index
kind    = "auto"      # output-kind hint for structured results

# Figures
fig-device-format    = "svg"      # png, pdf, html where supported
fig-device-dpi       = 150
fig-device-width     = 6
fig-device-height    = "auto"
fig-device-aspect    = 0.618
fig-display-width    = "70%"
fig-display-height   = "auto"
fig-display-align    = "center"
fig-display-responsive = true
fig-caption          = "none"
fig-caption-position = "auto"
fig-alt-text         = "none"
fig-subcaptions      = "none"
fig-layout-columns   = "auto"
fig-layout-rows      = "auto"
fig-layout-design    = "auto"

# calepin.chunk-only
engine = "python"      # force an engine instead of inferring from fence
body   = "..."       # raw code body when not in a fenced block
label  = "fit-summary" # stable reference id for results/figures
```
